

LUXE FIBER COLLECTIONS

Meticulously designed, these high fashion collections offer an assortment of colors and silky textures. Luxe fiber collections add a flair of style and elegance to your home.

Hand Shearing Effect:

- Luxe fibers are hand sheared. The hand shearing technique uses a flat shearing machine that creates distinctive variations in the pile.
- Lines may be present in the carpet or custom rug. Lines are not considered a defect but a result of the manufacturing and shearing process.
- Hand sheared items will not have a particular design or repeat. The shearing technique creates variations in luxe fiber carpet and will vary between rolls, within rolls, and within a custom rug.

Shading Effect:

- Shading occurs when carpet fibers lay in the opposite direction to the rest of the pile. This causes light to reflect differently, creating the appearance of lighter or darker areas, and may be more apparent with luxe fibers due to their sheen. Shading is commonly seen after vacuuming or foot traffic.
- Luxe collections may contain striations and variations in color. These characteristics are inherent and considered normal. Variation in texture and shading creates a distinctive, interesting character unique to every order.

Soft Nylon for Residential Use:

- Luxe fibers may be susceptible to loose or pulled yarns. These collections are made from 'soft' nylon and polyester yarns. Luxe fiber products have a delicate pile and may not be suitable for every lifestyle.
- Luxe collections are intended for residential use in areas with light traffic. Not suitable for installation on stairs.

Communicating the characteristics of luxe fibers will enhance the satisfaction and value to your customer. Katha Living will not honor claims for lines, shading, striations and variations in color, pile, or inconsistencies in shearing. Seaming luxe fiber carpet can be visible. Not all products are recommended for seaming. All seams are made at the discretion of the purchaser.
